CONCLUSIONS

Three take-home messages

1 Large, rigorous trials change practice

Thirteen multicenter RCTs, about 19,400 participants: letrozole for PCOS, freeze-all freeze-all only where it helps, and add-ons that did not.

2 Better methods find what single tests miss

Regional scores and forests reveal signals spread across variants or hidden in gene–hidden in gene–environment interplay, with error control at biobank scale.

3 One thread: heterogeneity

Effects differ by patient population in trials and by region and exposure in genomes; genomes; design and analysis must look for it.

With the NICHD Reproductive Medicine Network; Zi-Jiang Chen, Richard Legro, Richard Legro, and colleagues across China; and Yiran Jiang, Yue Hu, and Jiahe Jin and Jiahe Jin at Yale.
